

AMENDMENTS TO THE SPECIFICATION

Please amend the title of the application by rewriting same to read as follows.

--TELEPHONE AND CAMERA WITH A BIDIRECTIONALLY ROTATABLE LID HAVING A DISPLAY MOUNTED THEREON.--

Page 5, please amend the paragraph commencing at line 5 by rewriting same to read as follows.

As shown in the side view of FIG. 2B, a jog dial 14 is provided on a left side face of the case main body 2 to select various application functions and the like on a display screen 17 of a display device 6. The jog dial is an operating means which can be rotated or pressed. By rotating the jog dial, menu item displayed on the display device 6 is scrolled so as to select one item. Pressing it determines a selection of the menu item. Although this jog dial may be disposed on the same plane as a plane in which the ten key 4 is disposed, if it is disposed on the side face of the case main body 2, as described later, the picture-taking camera 11 disposed on the rear face of the case main body 2 can take picture of an object with the mobile phone 1 being folded, which is very convenient.

Page 7, please amend the paragraph commencing at line 8 by rewriting same to read as follows.

Although in case of FIG. 3A, the up-down direction of [[a]] the display screen 17 of the display device 6 is

inverted as compared to a case of FIG. 3C, it is so constructed that a proper screen 17 can be seen in a use condition of FIG. 3A by inverting the up-down direction of the screen 17 electrically.
